- Further increasing A380 efficiency and economics
- Maintaining A380 unique comfort level
- New large winglets to provide up to 4 % fuel burn savings
- 13% cost reduction per seat versus current A380

Airbus is presenting a development study for an enhanced A380, the “A380plus”. The study includes aerodynamic improvements in particular new, large winglets and other wing refinements that allow for up to 4% fuel burn savings. Added to an optimised A380 maintenance programme and the enhanced cabin features first shown at Aircraft Interiors Expo (AIX) in April, the overall benefit is a 13% cost per seat reduction versus today’s A380.

John Leahy, Airbus COO Customers, explains: “The A380plus is an efficient way to offer even better economics and improved operational performance at the same time.” John adds: “It is a new step for our iconic aircraft to best serve worldwide fast-growing traffic and the evolving needs of the A380 customers. The A380 is well-proven as the solution to increasing congestion at large airports, and in offering a unique, passenger-preferred experience. ”

The new winglets measure approximately 4,7 metres in height (an uplet of 3.5m, and a downlet of 1,2m). It is designed to improve aerodynamics and reduce drag.

The optimised cabin layout based on the ‘cabin enablers’ presented at Aircraft Interiors Expo (AIX), allows up to 80 additional seats* with no compromise on comfort: redesigned stairs, a combined crew-rest compartment, sidewall stowage removal, a new 9-abreast seat configuration in premium economy and 11-abreast in economy.

The A380plus will have an increased maximum take-off weight (MTOW) of 578 tonnes providing the flexibility of carrying up to 80 more passengers over today’s range (8,200nm), or flying 300nm further.

The A380plus features longer maintenance check intervals, a reduced six-year check downtime, and systems improvements, which will reduce maintenance costs and increase aircraft availability.

The A380 is the world's largest, most spacious airliner that offers passengers the smoothest, quietest and most comfortable ride. With two full widebody decks, offering widest seats, wide aisles and more floor space, the A380 has the unique capability to generate revenue, stimulate traffic and attract the flying public, who can now specifically select the A380 when booking a flight via the iflyA380.com web site. Over 170 million passengers have already enjoyed the experience of flying on board an A380 today. Every two minutes, an A380 takes off or lands somewhere in the world.
